PROJECT NAME

Fitness Tracker Mobile App Development

PROJECT DESCRIPTION

I'm looking for an experienced mobile app developer to create a fitness tracking app for a startup. The app's main purpose is to track workouts, with specific features including an exercise log, progress tracking, and a workout timer. This app will be a stand-alone, without integration with other fitness devices or apps.

Ideal skills and experience for this project:
- Mobile app development (iOS and Android)
- Experience in creating fitness-related applications
- Knowledge of incorporating features like exercise logs and progress trackers
- Ability to create a simple, user-friendly stand-alone app

REQUIRED SKILLS

Mobile App Development

iPhone

Android

React.js

React Native

CLIENT ENGAGEMENT

YOUR BID

Hi! I'm an experienced mobile app developer with a strong background in building fitness and productivity apps using React Native for both iOS and Android. I can deliver a clean, user-friendly fitness tracking app with an exercise log, progress tracker, and workout timer—completely stand-alone as requested.

Let's bring your startup's vision to life on time and within budget.
Looking forward to discussing this further!

12.

PROJECT NAME

Full Stack Developer for Mobile Puzzle App

PROJECT DESCRIPTION

I'm seeking an experienced Full Stack Developer to help build a puzzle-based mobile application from scratch. The project will include both frontend and backend development, with an estimated 5–6 mobile screens.

Key Requirements:
- End-to-end development (Frontend + Backend)
- Responsive and user-friendly UI
- Efficient and scalable backend architecture
- Integration of basic user features (e.g., login, game logic, leaderboard, etc.)
- Familiarity with deploying to Play Store / App Store is a plus

Ideal Skills and Experience:
- Proficiency in mobile app development for both iOS and Android
- Strong backend development skills
- Experience with UI/UX design for mobile applications
- Knowledge in integrating various login methods

Please provide portfolio and relevant experience.

REQUIRED SKILLS

Mobile App Development

Node.js

YOUR BID

I'm Uzair, a React Native developer with experience in building full-stack mobile applications from the ground up.

I can help you bring your puzzle-based mobile app to life with a clean and responsive UI, scalable backend, and smooth integration of essential features like login, game logic, and leaderboard.

What I offer:

Cross-platform mobile app development (Android & iOS)

Clean, intuitive UI/UX for all 5–6 screens

Scalable backend with Node.js (or your preferred stack)

Integration of authentication methods and leaderboard logic

Experience with deploying apps to the Play Store and App Store

You can view my previous work on GitHub: https://github.com/ALPHA54675/protfolio_Uzair

Let's connect to discuss your vision – I'm confident I can deliver a seamless and engaging user experience for your puzzle app.

Looking forward to collaborating with you!

Best regards,
Uzair

PROJECT NAME

Fitness App - Step Tracking & Credit System

PROJECT DESCRIPTION

Fitness App - Step Tracking & Credit System Bug Report

Overview:

We're developing a cross-platform fitness app using React Native with a FastAPI backend and MySQL database. The app tracks users' daily steps and calories burned using the TYPE_STEP_COUNTER sensor via a native Kotlin module. Since this sensor only counts steps from the last device reboot, not on a day-wise basis, we've implemented a workaround to track daily steps.

Current Flow:

- At midnight, we save the current step count from the sensor to our backend database.
- Each day, we calculate the steps walked by subtracting the last saved value (from the previous night) from the current sensor reading.
- This update is triggered using the react-native-background-fetch library to run the update task in the background.
- Once the daily steps and calories are calculated, we also compute and store credits earned for the day.

Credit System:

The user earns credits based on their step goal and calories burned:

- *Steps*
- 11,000 steps goal → 10 credits for 100% completion, 8 credits for 80%, etc.
- 10,000 steps goal → 8 credits max.
- 9,000 steps goal → 6 credits max.
- *Calories*
- 350 cal → 10 credits
- 250 cal → 8 credits
- 200 cal → 6 credits

The idea is to award credits proportionally based on the user's progress toward their daily goal.

The Bug:

The issue we're facing is that the nightly update task is not persisting the step count to the database. As a result:

YOUR BID

I'm Uzair, a React Native developer and student deeply passionate about mobile app development. I came across your fitness app project and it immediately caught my interest. The integration of native modules, background tasks, and a credit system based on physical activity is exactly the kind of real-world challenge I'd love to contribute to.

I understand you're facing a bug with the background fetch job not persisting data to the database. I'd be happy to dive into this issue — reviewing the react-native-background-fetch integration, ensuring the midnight job correctly triggers and sends the data, and confirming the FastAPI backend processes and stores it properly.

Here's why I'd love to work on this:

I'm currently building my portfolio and experience.

I'd like to contribute my time and skills completely free, in exchange for a positive review if you're satisfied with the work.

This would be a valuable learning opportunity for me and I'd make sure you receive quality contributions in return.

? You can review some of my previous projects here:
GitHub — https://github.com/ALPHA54675/protfolio_Uzair

Let's connect — I'm confident I can help resolve the current issue and support any future improvements too.

Looking forward to the opportunity!

Best regards,
Uzair
React Native Developer & Student

PROJECT NAME

Enhance React Native and Node.js Backend Mobile App and Make it Live

PROJECT DESCRIPTION

I'm looking for an experienced full stack developer to refine my existing React Native frontend and Node.js backend. The backend should support user authentication, database management, and API integration. I have most of code ready, it needs refinement and fixes here and there, along with hosting backend and making everything live on play store and app store.

Key Requirements:

Refine existing React frontend for improved performance and usability.

Refine Node.js backend with:

- User authentication
- Database management
- API integration

Ideal Skills and Experience:

- Proficiency in React and Node.js
- Experience with user authentication and database management
- Familiarity with API integration
- Strong problem-solving skills and attention to detail
- Ability to work collaboratively and communicate effectively

If you have a track record of successfully delivering similar projects, I would love to hear from you.

REQUIRED SKILLS

JavaScript

Mobile App Development

MySQL

Node.js

React Native

CLIENT ENGAGEMENT

YOUR BID

I'm Uzair, a passionate React Native and Node.js developer, currently a student building up my real-world experience and portfolio. I came across your project and would love the opportunity to collaborate with you on refining both the frontend and backend of your application.

You're looking for someone to enhance the performance and usability of your React Native frontend and optimize your Node.js backend (including user authentication, database management, and API integration), as well as deploy everything — and that's exactly the kind of challenge I'd enjoy.

Why choose me?

I'm offering to work on this project completely free of cost, in exchange for a positive review on my profile if you're happy with my work.

I'll ensure your backend is production-ready, your frontend is responsive and smooth, and that the app is successfully hosted and published to both Play Store and App Store.

I'm eager to contribute, learn, and deliver quality work, while you get a committed developer without impacting your budget.

GitHub Portfolio:
https://github.com/ALPHA54675/protfolio_Uzair

Let's team up — I'm confident I can help you bring this project across the finish line while ensuring everything runs seamlessly.

Looking forward to working with you!

Best regards,
Uzair
React Native | Node.js Developer & Student

15.

React Native Teleprompter App...19 hours, 9 minutes#60 of 67 bids-\$2.00 USD00Chat

PROJECT NAME

React Native Teleprompter App Development

PROJECT DESCRIPTION

I'm looking to hire an expert in React Native, TypeScript, and Clerk for mobile authentication integration. The project involves developing a teleprompter app with the following features:

React Native Frontend (Priority):

- PDF upload script
- Camera view activation
- Teleprompter script display

TypeScript Express Backend:

- Set up robust server-side logic
- Ensure smooth data flow and integration with frontend

Clerk Authentication Integration:

- Implement secure mobile authentication
- Ensure seamless user experience

Ideal Skills and Experience:

- Proficiency in React Native and TypeScript
- Experience with Express.js and Clerk authentication
- Strong background in mobile app development
- Ability to deliver high-quality, bug-free code
- Excellent communication skills and responsiveness

REQUIRED SKILLS

YOUR BID

I'm Uzair – a React Native developer and student who's passionate about building clean, responsive mobile apps. Your teleprompter project sounds super exciting, and I'd love to contribute to it while learning more from a real-world development experience.

You're looking for a developer skilled in React Native, TypeScript, Clerk, and Express.js – and that aligns perfectly with what I've been focusing on. I'm confident I can help you implement the PDF upload script, teleprompter UI, and camera view, as well as set up the backend and integrate Clerk authentication.

Why choose me?

I'm offering to work for free, simply in exchange for a good review if you're happy with the outcome.

I take pride in delivering clean, functional code with good UI/UX – even more so when working on something practical and creative like a teleprompter app.

You'll get a passionate developer who is committed, responsive, and always learning.

GitHub Portfolio:
https://github.com/ALPHA54675/portfolio_Uzair

I'd love to support your project while gaining valuable hands-on experience. Looking forward to the opportunity!

Best regards,
Uzair
React Native & Node.js Developer | Student

16.

React Native UI Modernization3 days, 11 hours#12 of 21 bids-₹600.00 INR00Chat

PROJECT NAME

React Native UI Modernization

PROJECT DESCRIPTION

We've developed an Android app using Kotlin (for root-level Android services) and React Native (for screens and components). Backend is complete. All functionality is fully implemented and working. Basic UI is already in place.

We are looking for a skilled React Native frontend developer with a strong eye for modern, clean, and professional UI design to:

Redesign the existing UI (all screens) to look next-level and professional.

Keep all the current functionality intact.

Ensure smooth user experience and responsiveness.

Make use of best practices for performance and design. Requirements:

Strong experience with React Native UI/UX design.

Understanding of Material Design / Modern Mobile Design Patterns.

Must maintain the existing code logic – focus only on visual and user experience enhancements.

Experience with Android (Kotlin) is a plus but not mandatory

YOUR BID

I'm Uzair – a React Native developer and a passionate student actively building my portfolio through real-world projects. I came across your app UI redesign task, and it aligns perfectly with both my skills and interests.

You already have a working backend and functionality – what you need now is a polished, professional, and modern UI. That's exactly where I'd love to jump in.

What I can offer:

A completely revamped UI using modern mobile design practices and pixel-perfect layouts.

Smooth animations and transitions that enhance user experience.

A fully responsive design that looks great across all screen sizes.

Strict respect for your existing logic and functionality – no disruptions, just a better front-end.

I'm happy to work on this project for free, in exchange for a positive review if you're satisfied with the outcome. I'm building my profile and would love to support your project as part of that journey.

GitHub Portfolio:
https://github.com/ALPHA54675/portfolio_Uzair

Let's give your app the UI it deserves. I'd love to collaborate!

Best regards,
Uzair

I'm Uzair, a React Native developer passionate about crafting smooth, engaging mobile experiences. I'd love to help you elevate your existing app with polished UI/UX improvements and high-performance animations.
What I Offer:
UI/UX Enhancements: Refine layouts, typography, spacing, and form interactions to boost usability and visual appeal.
Fluid Animations: Implement text fades, button presses, field focus effects, and page transitions using libraries like react-native-reanimated, Lottie, or react-native-animatable for butterly-smooth performance.
Performance Focused: Optimize animation timing and resource usage so your app stays snappy on both iOS and Android.
Next Steps:
Let's connect via IM to review your research findings and available code samples.
Once I have the full scope, I'll provide a detailed estimate and timeline.
You can check out my past work on GitHub:
https://github.com/ALPHAS4675/portfolio_Uzair
I'm ready to dive in and help make your app truly stand out—looking forward to collaborating!

I'm Uzair, a React Native developer and a student passionate about learning through real-world projects.
I understand you're facing an issue where the API call works perfectly in debug mode but not in the production APK — I've handled similar issues before, often related to production build settings, API URLs, CORS issues, or environment configuration differences.
I am very eager to help you fix the API call issue efficiently.
Since I'm looking to build my profile, I'm happy to assist at no cost or for a minimal fee, in exchange for a good review and practical experience.
You can expect clean, professional work and clear communication from me!

Your Proposal Details

I'm Uzair, a React Native developer and a student currently building my freelance career.

I have experience working with React Native for both Android and iOS platforms. I understand you need help with resolving app audit issues and implementing solutions that you already have prepared. I am confident I can implement these efficiently while ensuring both apps meet the required standards.

Since I am focusing on gaining more experience and positive feedback, I am willing to work for free in exchange for a good review if you are satisfied with my work. I'm committed to delivering quality work, clear communication, and full dedication to this project.

Looking forward to hearing from you and contributing to your project's success!

Best regards,
Uzair

Your Proposal Details

I'm Uzair, a passionate Android and React Native developer, and currently a student working hard to build my freelance career.

I am very interested in helping you develop the Calling Mobile App as described — focusing on internet to mobile phone calls (not app-to-app), for the Android platform. I have solid experience with Java, Android Studio, Android SDK, and integrating calling functionalities into mobile applications.

To help grow my profile and gain more real-world experience, I am willing to work on this project for free — in exchange for a good review on my profile if you are satisfied with the work. I can assure you of delivering a stable, user-friendly, and efficient app with clean code and full dedication.

I'm Uzair, a passionate React Native (Expo) developer and a student actively building my portfolio. I would love to help you fix the issue in your application.

I have experience troubleshooting and resolving bugs quickly and efficiently in React Native apps, especially those built with Expo. I can dive into the problem, identify the root cause, and deliver a clean, working solution while maintaining your app's stability.

As I'm currently growing my freelance profile, I'm willing to work for free on this project in exchange for a good review if you're satisfied with my work!

GitHub Portfolio:
https://github.com/ALPHA54675/profile_Uzair

I am confident I can fix the issue and ensure your app runs smoothly again. Looking forward to hearing from you and contributing to your project!

I'm Uzair, a React Native student developer eager to build real-world experience. I'd love to create your driver tracking app—completely free—in exchange for a positive review on my profile.
Here's what I'll deliver (≈ 7 hrs):
Goods In/Out Workflow: Intuitive screens for scanning or entering delivery challan numbers, selecting origin/destination warehouses, and confirming in-out status.
Driver-Friendly UI: Large touch targets, clear labels, and offline caching so drivers can work seamlessly even without full connectivity.
History & Status: A simple list or dashboard showing recent deliveries, with timestamps and warehouse details.
Error Handling & Feedback: Inline validation and success/error messages to keep drivers informed.
I'll ensure the app is comfortable and efficient for drivers to use, with clean, maintainable code.

GitHub Portfolio:
